

A Playful Learning Approach for Improving Astronomy
Literacy of Kids

Space Guardians 2 is an exciting project for Astronomy Education for Children!

During a period of 3 years, a group of experts from 4 different European countries, are going to create a:

- ★ learning framework for Astronomy Education at primary school level, that schools and educators can use to engage in Astronomy topics;
- ★ boardgame with Astronomy-related contents, featuring digital elements and a space-themed construction kit, to create a memorable and meaningful learning experience;

This initiative follows a previous project, Space Guardians, that resulted in a set of interactive ebooks and other learning resources to bring astronomy into the pre-school classes and the lives of the young ones!

Find out how you can take part in the Space Guardians 2 project.
